CHALLENGES

Our automation solution was developed to reduce the total no. of clicks, navigating through multiple applications and significantly provide a time efficiency solution. We aimed to reduce the carbon print of our client with a wholesome cloud-based solution. Technology Stack included: Django or Python Flask, MySQL, API Integration, Web scraping, PostgreSQL – in Microsoft Azure – PAAS, Python – FAST API and React

SOLUTION

- 💬 Our team started off with research, exploring information and building on domain knowledge followed by a High-Level Design Documentation for a transfer pricing reporting services project. 7. Demonstrated 70% efficiencies in automation by reducing 57 as is effort in days to 17 days
- Using the latest technology stack this project covered 17 business workflows for user management, questionnaire management, client activities, administration, database management, API integration, formatting of the report, and Determining Transaction is at Arm's length.
- ✅ Document the complex business workflows (mainly manual work) to showcase time efficient automation workflows
- ✅ Automation opportunities backed with audit mechanism to capture user engagement on the web application
- ✅ High-level solution design was provided, clearly mapping out processes, notifications, user engagement, audit trail on each step of the process to meet the compliance requirement of transfer pricing report

A cloud-based web application for automation of Transfer Pricing
